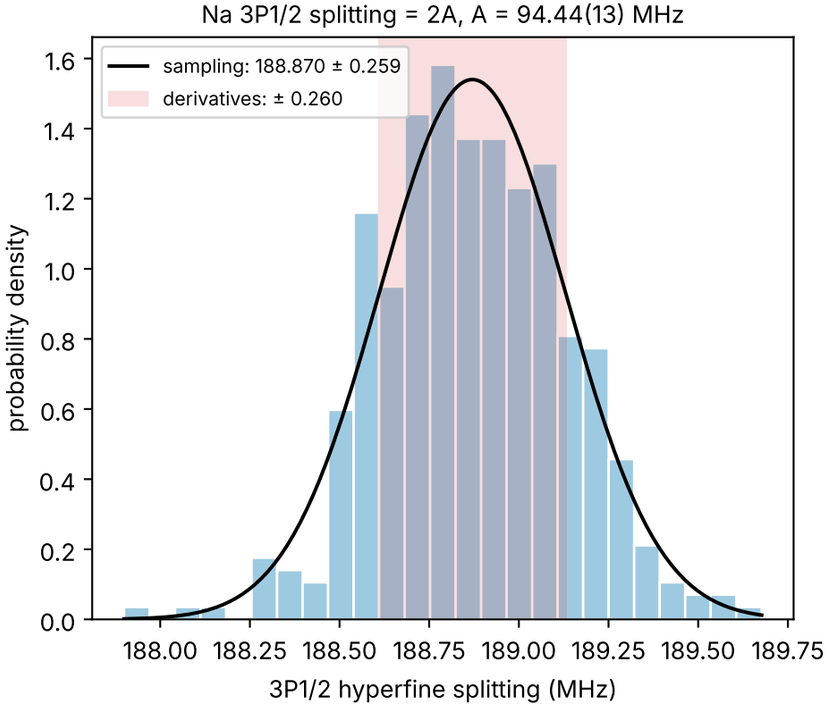
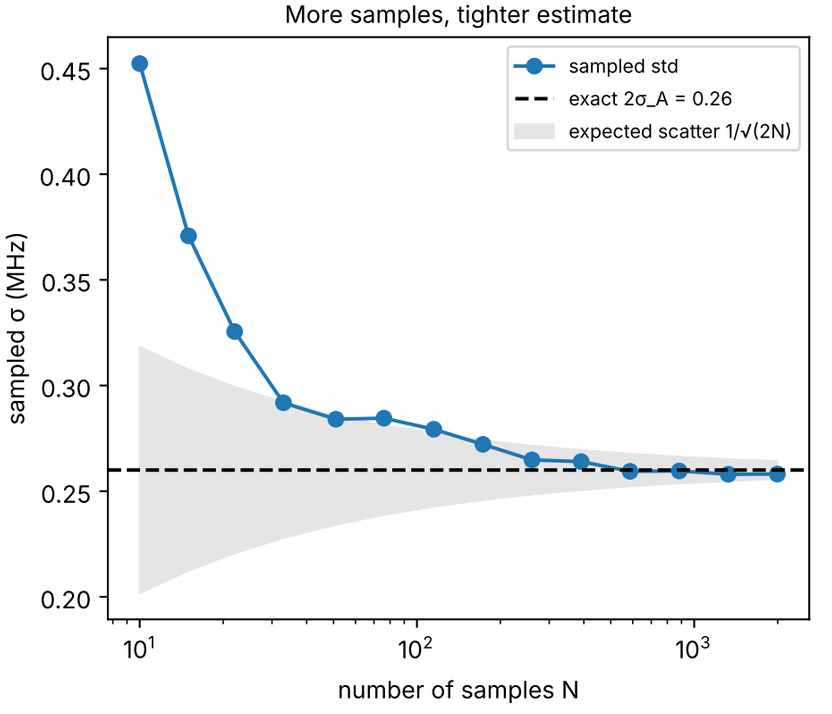
H 2S×2P crossing, Lamb shift ± 1 MHz (assumed)
sampling: 573.361 ± 0.546
derivatives: ± 0.548
probability density
crossing field (G)



Na 3P1/2 splitting = 2A, A = 94.44(13) MHz
sampling: 188.870 ± 0.259
derivatives: ± 0.260
probability density
3P1/2 hyperfine splitting (MHz)



More samples, tighter estimate
sampled std
exact 2σ_A = 0.26
expected scatter 1/√(2N)
sampled σ (MHz)
number of samples N
