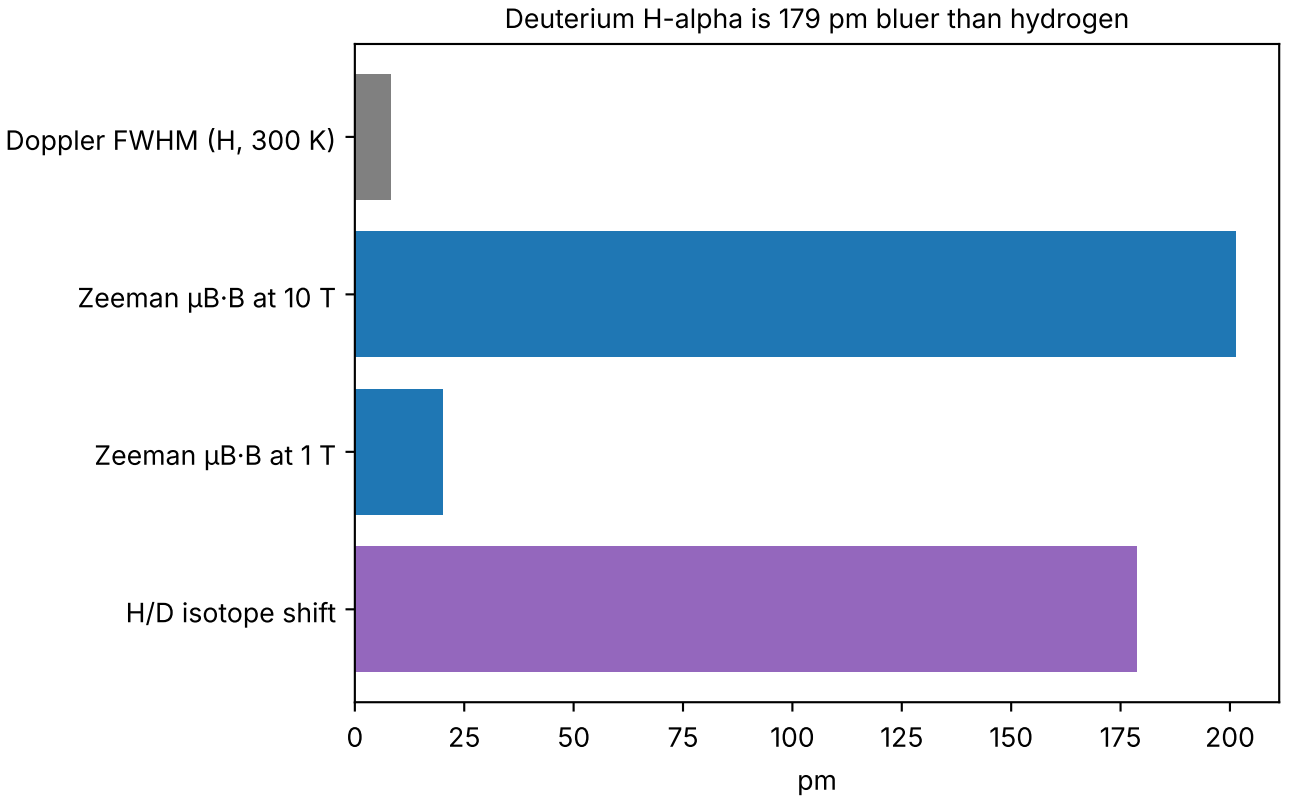
H-alpha: diamagnetic term is small against Zeeman,
but reaches the Doppler width near 60 T
diamagnetic (largest component)
Zeeman scale μB·B
Doppler FWHM, 300 K
shift (pm)
B (T)



Deuterium H-alpha is 179 pm bluer than hydrogen
Doppler FWHM (H, 300 K)
Zeeman μB·B at 10 T
Zeeman μB·B at 1 T
H/D isotope shift
pm
